

ADDENDUM

to the paper

ON THE TAYLOR COEFFICIENTS
OF RATIONAL FUNCTIONS*

BY K. MAHLER

Received 30 September 1956

As I have just learned, the main results of my paper had already been proved in a more general form by Lech ('A note on recurring series', *Ark. Mat.* 2 (1952), 417–21). He uses a different and rather shorter method which is based on the extension of a valuation to a larger field.

* Vol. 52 (1956), 39–48.
